KITFOX SERVICE LETTER #2

SUBJECT: FUEL TANK INSTALLATION

TO: ALL KITFOX OWNERS

FROM: DENNEY AEROCRAFT COMPANY

FUEL TANK INSTALLATION: We recommend the use of structural adhesive to join the E-26 Fuel Tank and the E-21 Filler Neck. Silicon that claims to be gasoline resistant may be attacked by additives in some brands of gasoline. Some builders have experienced a physical deterioration of silicon based products used to join the E-21 Filler Neck and the E-26 Fuel Tank. The silicon has become stringy and dropped into the tank.

When fueling the KITFOX use extreme caution and strain all gasoline to remove any impurities in the fuel. Shell and Chevron Company officials have assured us that they have no ethanol or alcohol additives. Use only gasoline with a pump octane rating over 85.

If you need assistance in any way, please call customer service. Before returning any items to Denney Aircraft Co. please obtain a Return Goods Authorization (RMA) number from customer service.
